

## PowerAgent's PAWeb Shareholder Recordkeeping Portal Receives Security Certification

*Independent audit confirms security controls within the software*

**Irvine, CA. April 4, 2011** — Envision Financial Systems, Inc., a leading provider of technology solutions to the mutual fund industry, today announced that their PAWeb application has received certification as a secure web application. PAWeb is the internet software for the award-winning PowerAgent shareholder recordkeeping platform.

Envision engaged Paladion, an independent security consulting and implementation firm specializing in enterprise security, to perform an unbiased analysis of the PAWeb application. The goal was to assess its ability to withstand remote adversaries and protect against a wide range of threats. The study was composed of 16 protection and security criteria an application must possess. Among these include:

- Safe against popular attacks
- Defends against threats
- Protects sensitive data in transmission
- Password protection and safe guards

"Envision understands the importance software security plays in the overall protection of private data so we felt it was important to ensure PAWeb was as secure as possible against the common threats of the internet," said Tom Wiedecker, Executive Vice President and Chief Client Officer of Envision.
